## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 7 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Mori et al. (U.S. Patent No. 6,292,267 B1).

As to claim 7, Mori teaches an image forming apparatus (i.e., network printer apparatus 20 in fig. 46) capable of being connected to a plurality of external apparatuses (i.e., client 52 in fig. 46 or PC in fig. 5B) and performing image formations based on data sent from the external apparatuses, said image forming apparatus comprising:

a plurality of paper ejection trays (i.e. mailbox 51 in fig. 46 includes a plurality of bins) for receiving sheets on which images are formed (col. 29, lines 61-65); and

notification means (i.e., the display means or the liquid crystal panels are provided on the side of the bin for notifying the paper name/number "col. 30, lines 50-53") for notifying a user of a specific one of the paper ejection trays in which a last ejected sheet is present (col. 33, lines 38-40; it is noted that the paper number of the latest paper stored in the bin would include a last sheet which is present), wherein the notification means comprises:

Art Unit: 2624

a plurality of notifying units (i.e., the display of liquid crystal panels) respectively disposed on the paper ejection trays (i.e., bins from the mailbox 51 in fig. 46 or 47) or in the vicinity of the paper ejection trays (col. 35, lines 8-11 and 18-21 describes each bin has each display on the liquid crystal panel); and

a controller (i.e., the mailbox controller 20a in fig. 47), connected with the notifying units (col. 34, lines 62-64), for controlling the notifying units including controlling a respective notification unit to communicate an indication notifying the user (col. 34, lines 1-28) that the last ejected sheet is present in the corresponding paper ejection tray (col. 33, lines 38-40 describes that number of the latest paper stored in the bin, which would include a last sheet, is present and is displayed on the LCP of the bin); also, the software for controlling the mailbox "col. 33, line 13" for checking the total number of sheets of printed paper accommodated in the bin, detecting overflow and instructing the bin to be replaced at the time of overflow; and col. 35, lines 28-34 describes that the remaining printed paper is accommodated in the retrieved bin which is replaced the bin having overflowed. Thus, the remaining printed paper, which include a last printed paper, is displayed on the liquid crystal panel of the bin which has replaced the bin "col. 35, lines 30-34").

As to claim 8, Mori teaches each of said notifying units is a display unit (fig. 43 and col. 30, lines 50-56).

Art Unit: 2624

## **Contact Information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas Q. Tran whose telephone number is (703) 305-4857 or E-mail address is douglas.tran@uspto.gov.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-4700.
